WE RECENTLY RECEIVED PLANT BREEDER'S RIGHTS AND/OR PLANT PATENT RIGHTS FOR THE FOLLOWING VARIETIES. ACCORDING TO THIS RESEARCH THE VARIETIES ARE HOMOGENEOUS, STABLE AND **CLEARLY DISTINGUISHABLE** FROM ANY OTHER VARIETY

MORREN's * Jonagored SUPRA®

Jonagored Supra will worthily continue the **success** of the Jonagored. Its advantages: the colour intensity is very high. In the for more than 90% **softer-red** coloured flush are very fine stripes scarcely visible. These fine red stripes continue in the 10% greener side.

Supra's beautiful round apples colour and mature **±10 days earlier** than Jonagored. Although the variety is virus free, it seems to have a **weaker growth** and is even more **productive** than Jonagored.

Jonagold 2000 * EXCEL®

Excel's **pink-red** blush with very fine stripes is really looking superb!

This apple distinguishes itself from any other bright red Jonagold mutation by its **specific green** background. The fine stripes, which are scarcely visible in the pink-red blush, give the apple the greatest similarity to the mother variety.

The variety has a less vigorous growth and is very productive.

As the colouring is much better and the background keeps longer green, the Excel returns a higher percentage of first class fruit...

And the whole year round the **best paid Jonagold price...!**

Red ELSWOUT * Bel-EL®

This variety has a less dense, bushy foliage than its parent variety, therefore it **doesn't require summer-pruning**. The apples colour beautifully red also in older trees, store very well and do not have a rough skin.

Bel-EL is ready for picking directly after the summer varieties. At that time there mostly is a short supply on the market whereby then higher returns are obtained. Therefore we advice to sell the fruit during picking time.

THESE VARIETIES ARE PROTECTED BY PLANT BREEDER'S RIGHTS AND/OR PATENT RIGHTS. OUR WRITTEN PERMISSION IS REQUIRED, WHEN YOU WANT TO PROPAGATE THEM YOURSELF. PLEASE ASK OUR CONDITIONS.

**OUR VARIETIES ARE YOUR CONFIDENCE WORTHY!
