### MOST IMPORTANT CHARACTERISTICS

**Productivity:** very productive, less stronger growth  
**Time of colouring:** Supra ripens and colours 10 to 14 days earlier than Jonagored  
**Time of harvesting:** between 10/9 and 10/10, in 2 pickings  
**Fruit size and fruit colour:** medium to large fruit. Soft red coloured flush over more than 90% of the fruit skin with almost invisible fine red stripes  
**Fruit flesh:** cream-coloured, crisp and very juicy, with pleasantly fresh and fine taste  
**Remark:** Jonagored Supra will worthily continue the **success** of the Jonagored. Its advantages: the colour intensity is very high. In the for more than 90% **softer-red** coloured flush are very fine red stripes scarcely visible. These fine red stripes continue in the 10% green side.  
Supra's beautiful round apples colour and mature **±10 days earlier** than Jonagored. Although the variety is virus free, it seems to have a **weaker growth** and is even **more productive** than Jonagored.
